Dear colleagues,

It is with great pleasure to give you a warm welcome to the symposium “Future Perspectives in Cardiovascular Medicine” that has been organized with the Charité Universitätsmedizin Berlin.

We will discuss state of the art and future perspectives of cardiovascular medicine, including prevention and management of coronary disease, novel developments in treatment of valvular and structural heart disease, arrhythmia and heart failure. The important implications of multi-modality cardiovascular imaging approaches towards optimized clinical management will be highlighted.

Charité Berlin has an important history in cardiovascular medicine, including the nobel laureate Werner Forssmann, who first delivered a catheter to the heart that has opened a new door in management of cardiovascular disease. We will also discuss the important role of big data and digital health in the future approach towards cardiovascular disease.

We have an outstanding national and international faculty of experts and we are looking forward to welcoming you to the rapidly developing Berlin and the Charité.

*Prof. Ulf Landmesser
President of the Meeting*
